AI Solutions / Automation / Applied AI Workflow Builder

Founder-operator with 10+ years across product, technical systems, workflow automation, rewards/fintech infrastructure, partnerships, operations, and commercial execution. Built Rewards Bunny to 120,000+ registered users, 10,000+ merchants/brands, and US\$7M+ cumulative GMV. Strong at understanding business processes, mapping system constraints, using AI and automation to prototype solutions, and translating operational problems into repeatable workflows, tools, and launches.

CORE STRENGTHS

- AI agents, LLM workflows, tool-calling concepts, MCP concepts, and structured prompts
- Workflow automation, business process design, and AI-assisted operations
- APIs, SQL/MySQL/Percona, PHP/Laravel, JavaScript/TypeScript, React, Docker, Linux, Nginx, Cloudflare, GCP, Hetzner, DNS/SSL, backups, production debugging
- Rapid prototyping with commercial/product judgment
- Data and ML literacy: Python, pandas, NumPy, scikit-learn, Jupyter notebooks

PROFESSIONAL EXPERIENCE

Rewards Bunny — Founder & CEO

Singapore / Global | 2021-Present

Rewards-commerce platform spanning affiliate attribution, merchant integrations, reward workflows, payouts, partner systems, and emerging AI-agent use cases.

- Founded and operated a rewards-commerce platform with 120,000+ registered users, 10,000+ merchants/brands, and US\$7M+ cumulative GMV.
- Built understanding across affiliate tracking, merchant integrations, reward rules, user identity, segmentation, payout workflows, partner systems, customer journeys, retention, and incentive design.
- Translated operational and commercial problems into product requirements, workflow improvements, technical troubleshooting, vendor coordination, and launch execution.
- Worked hands-on with APIs, databases, PHP/Laravel, MySQL/Percona, JavaScript/TypeScript, React, Docker, Linux, Nginx, Cloudflare, DNS/SSL, backups, and cloud infrastructure.
- Planned and executed a GCP to Hetzner + CapRover + local database migration that reduced infrastructure costs by approximately 20x from a peak monthly cloud charge of US\$1,581.83 while preserving continuity and recovery discipline.
- Explored AI-agent-ready infrastructure concepts including MCP, agent-readable documentation, skills-style interfaces, structured prompts, API-based workflows, AI-assisted operations, and automation.

PROFESSIONAL EXPERIENCE CONTINUED

VibeLaunch Framework — Creator & Maintainer

Open-source | 2026

Workflow framework for human + AI-agent launch processes.

- Created structured prompts, YAML checklists, evidence requirements, launch audits, release gates, hosting/deployment checks, Cloudflare workflows, API/security considerations, and troubleshooting flows.
- Shows ability to convert unstructured execution knowledge into repeatable, agent-compatible operating systems.

Hotel No-Show Prediction — Applied ML Project

2026

Public GitHub project.

- Used Python, pandas, NumPy, scikit-learn, preprocessing, feature engineering, classification, model evaluation, and Jupyter notebooks.
- Worked with 119,390 usable rows and achieved Random Forest ROC AUC around 0.796; positioned as applied ML literacy, not senior data science.

WhaleSave — Co-Founder & CTO

Singapore | Sep 2019-2021

Gaming and digital-purchase cashback product.

- Worked across reward logic, user motivation, segmentation, retention, product workflows, and digital-commerce mechanics.

DinoMao — Co-Founder / CTO

Singapore | Oct 2018-2021

Singapore-developed digital claw-machine app.

- Worked across consumer product development, technical workflows, ecosystem design, operations, and customer experience.

SELECTED PROJECTS AND EDUCATION

- Best-fit problems: automate fragmented business processes, prototype AI solutions around agents/tools/APIs, and bridge business stakeholders with implementation details.
